

Release Notes Updates

When a new release comes out, the core and client release notes pages have to be updated.

The procedures are slightly different for core and clients releases. The procedures are also different for minor and point releases. When we have a major release, that release follows the procedures for minor releases.

Reminder: For a release numbered X.Y.Z, X is major, Y is minor, Z is point.

Core

The core releases are organized under the Release Notes heading in the docs table of contents.

There is a landing page for each of the last five minor releases. This landing page is a rehosted version of the blog post for that release.

The landing page for the releases subsection has lists of all core and client releases. It also has charts that show which clients are available at the time of each release. One chart shows which clients are available for the point releases in the current minor release. The other chart shows similar information for past releases.

Clients

The clients all have landing pages. The landing page for each client has a section devoted to releases. The section has these elements.

- A list of client releases
- A chart of the clients for the current point releases

- A chart of the clients for the past minor releases

Procedures

To update the release note pages, follow these procedures:

Core point releases

1. Update the Release Note landing page.

Edit the 'Current minor releases' section.

The lines look like this:

```
| [1.25.7][c1.25.7] | 2024-07-04 | [4.6.6][p4.6.6] | [3.0.8]
```

To add a new line, copy the top line and make these changes:

- a. Edit the core version number: [1.25.7].
- b. Edit the release note link: [c1.25.7].
- c. Edit the date.
- d. Check recent client releases, update if there was a client release since the last core release.
- e. If the client version is not updated, change the client version to " in earlier core version rows.
- f. Add a new row to the 'Weaviate Core' details section.

```
| [1.25.7][c1.25.7] | 2024-07-04 |
```

- g. Add the new version link to the '[comment]: # (core links)' section:

```
[c1.25.7]: https://github.com/weaviate/weaviate/releases/1
```

2. Update the matrix include.

The matrix page is here:

```
_includes/clients/matrix-intro.md
```

The lines look like this:

```
| [1.25.5](https://github.com/weaviate/weaviate/releases/tag/
```

To add a new line, copy the top line and make these changes:

- a. Edit the core version number: [1.25.5].
- b. Edit the release note link:
<https://github.com/weaviate/weaviate/releases/tag/v1.25.5>.
- c. Edit the date.
- d. Check recent client releases, update if there was a client release since the last core release.
- e. If the client version is not updated, change the client version to " in earlier core version rows.

Core minor releases

1. Update the Release Note landing page.

- a. Copy the x.y.0 line from 'Current core and client releases' to 'Previous core and client releases'.

```
| [1.25.0][c1.25.0] | 2024-05-10 | [4.6.0][p4.6.0] | [2.1
```

- b. Add a column for 'Up voted issues'.

```
| [1.25.0][c1.25.0] | 2024-05-10 | [4.6.0][p4.6.0] | [2.1
```

- c. Erase all but the most recent line from 'Current core and client releases'.
- d. Edit the version to show the new x.y.0 release.
- e. Edit the date.

f. Check recent client releases, update if there was a client release since the last core release.

g. Add a new row to the 'Weaviate Core' details section:

```
| [1.26.0][c1.26.0] | 2024-07-04 |
```

g. Add the new version link to the '[comment]: # (core links)' section:

```
[c1.26.0]: https://github.com/weaviate/weaviate/releases/tag/c1.26.0
```

2. Update the matrix include.

The matrix page is here:

```
_includes/clients/matrix-intro.md
```

The lines look like this:

```
| [1.25.5](https://github.com/weaviate/weaviate/releases/tag/v1.25.5)
```

- Copy the x.y.0 line from 'Current core and client releases' to 'Previous core and client releases'.
- Erase all but the most recent line from 'Current core and client releases'.
- Edit the version to show the new x.y.0 release.
- Edit the date.
- Check recent client releases, update if there was a client release since the last core release.

The updated line looks like this:

```
| [1.26.0](https://github.com/weaviate/weaviate/releases/tag/v1.26.0)
```

3. Add the newest minor release landing page.

Create a new minor release file in this directory:

```
developers/weaviate/release-notes
```

Edit this code to reflect the new version number. The new release should be first in the list of releases. This code assumes that there is copy that can be imported from a blog post.

```
---
title: Weaviate 1.20.0
sidebar_position: 25
image: og/docs/modules/custom-modules.jpg
tags: ['release', 'engineering']
---

import Core120 from '/blog/2023-07-11-weaviate-1-20-release/_

<Core120 />
```

4. Move the oldest minor release landing page.

Move the oldest minor release page to the 'older-releases' sub-directory.

Update the redirects file:

```
site.redirects.js
```

The redirects are near the end of the file. They look like this:

```
{
  to: "/developers/weaviate/release-notes/older-releases/relea
  from: "/developers/weaviate/release-notes/release_1_16"
},
```

Client releases

1. Update the client page.

The landing page for each Weaviate client has a releases section.

Add a line like this to the client details section:

```
| [4.7.0](https://github.com/weaviate/java-client/releases/tag/v4.7.0)
```

2. Update the releases page.

- a. Add a line like this to the release details for the client.

```
| [4.6.6][p4.6.6] | 2024-07-02 |
```

- b. Add a link in the client links section.

```
[comment]: # ( python client links )
```

```
[p4.6.6]: https://github.com/weaviate/weaviate-python-client/releases/tag/v4.6.6
```

If the client release coincides with a core release, verify that the latest version of the client is shown in the core-client releases charts.
